

ANNUAL REPORT 2013

DEAR FRIENDS

The IVUmed experience is unique. Two surgeons standing across the operating table glance up from their delicate work below. From behind their masks, they discuss options and share techniques. They return their gaze to the lighted field below where their hands continue the operation. Behind them stand a dozen other surgeons, draped in blue and green scrubs, watching intently the surgical instruction presented before them.

This scene takes place hundreds of times each year and the tireless work of our volunteers and supporters is magnified on a global scale. Our focus on teaching takes the service donated to each patient and multiplies it by the hundreds of doctors and nurses we train in partner hospitals. Thanks to your support, IVUmed conducted 21 surgical training events in the most recent fiscal year. These workshops offered service to over 700 children and adults in need of quality urological care, and even more significantly, helped our global partners strengthen their surgical teaching programs.

Our reach continues to grow. Through partnerships with the *Société Internationale d'Urologie (SIU)*, the *Pan-African Urological Surgeon's Association (PAUSA)*, and many regional surgical societies, we reach several countries during each workshop. The *American Urological Association (AUA)* also supports our research initiatives to further measure the impact of our work.

And the impact is significant. One of our lead pediatric partners, Dr. Batsuh Demberel-nyambuu, more familiar to IVUmed as Deegii, was recently named the "Mongolian Great Young Doctor of 2013". Meanwhile, our partners in Haiti performed their first vesicovaginal fistula repairs independent of IVUmed teams, putting their workshop training successfully into practice and creating a local solution to treat a condition with traumatic effects on quality of life.

Every year, we reach hundreds of people through our innovative teaching programs. Each workshop, each interaction across the operating table adds to an educational effort with a global impact. By supporting the leading nonprofit organization specializing in building urological capacity, you make a difference in over 30 other countries worldwide.

Warmest Regards,

Peter W. Steelman, Board Chair

Catherine R. deVries, MD, President

Joshua Wood, Executive Director

TEACH ONE, REACH MANY

Why IVUmed?

IVUmed is the leading organization dedicated to teaching urology in low-resource areas of the world. Founded to help address the global need for professional training and patient care in pediatric urology, IVUmed has since grown to include virtually all areas of urology. We incorporate education for nurses, anesthesiologists, radiologists, pathologists and other professionals in related areas of medical and surgical care to help our global partners build self-reliant teaching programs.

From congenital malformations like hypospadias, which occurs in one out of every 125 boys, to pelvic floor injuries among women, strictures, cancers and other diseases, urology represents a vastly underserved area of global health. In a world in which 2 billion people lack access to surgical care, IVUmed's capacity-building approach helps develop locally-driven solutions to a significant global challenge.

IVUmed's Approach

While IVUmed's surgical workshops provide service directly to patients in need of urological care, the lasting solution to the global shortage of care involves building surgical capacity. By teaching doctors and nurses in resource-poor areas of the world the skills they need, people in their communities will have greater access to services.

We accomplish this through a combination of intensive hands-on surgical training, classroom instruction and remote telehealth consultation. This gives each of our global partners the opportunity to master one or more subfields of urology. Our partners are then equipped to teach the skills they acquire to their students and colleagues, thereby increasing the network of urology professionals within each IVUmed partner community.

WHAT WE DO

A TRADITION OF LEADERSHIP IN
GLOBAL UROLOGICAL TRAINING

GENERAL UROLOGY

As incidence of urological diseases such as kidney disease and bladder cancer continue to grow in developing nations, the demand for further training in general urology has increased. In addition to workshops using our proven training model, IVUmed volunteers focus on general urology through our Traveling Resident Scholar Program.

IVUMED'S WORKSHOP-BASED TRAINING MODEL GIVES VOLUNTEERS OPPORTUNITIES TO MENTOR, TEACH, AND RETURN TO THE GRASSROOTS OF MEDICINE.

FEMALE UROLOGY

IVUmed's women's health program focuses on female urology, with an emphasis on incontinence. Vesico-vaginal fistula (VVF), a devastating condition in which a woman suffers incontinence due to injuries resulting from an obstructed labor or sexual violence, affects over 2 million women worldwide. Treating VVF and other causes of incontinence is one of the most important steps in returning women to safe and productive lives. The women's health program also focuses on other conditions, like pelvic prolapse, while bringing together experts in female urology for training and capacity building in sub-Saharan Africa, Haiti and elsewhere.

"When I'm in Uganda, I put my head on the pillow and I remember why I went to medical school."

- Raleigh Humphries, MD, Urologist, Uganda

PEDIATRIC UROLOGY

When established in 1992, IVUmed's first programs were dedicated to pediatric urology. Reproductive and urinary tract malformations are among the most common birth defects affecting children worldwide. IVUmed addresses the lack of trained doctors able to treat this substantial burden through specialized intensive trainings and distance learning opportunities. Due to continued demand, we have conducted these trainings in over 20 countries since the program first began.

UROLOGIC ONCOLOGY

Statistics have shown that urologic cancer rates are rising worldwide. According to the World Health Organization's International Agency for Research of Cancer, the number of prostate cancer cases alone is expected to nearly double to 1.7 million in less than 20 years. As a result, requests for IVUmed's urologic oncology trainings have increased significantly in recent years. IVUmed experts provide education for treatment of common urologic cancers such as bladder and prostate cancer. Recent programs in Mongolia, Nigeria, Uganda, and the West Bank have been successful in reaching more practitioners, allowing them to better serve their patients' needs.

RECONSTRUCTIVE UROLOGY

IVUmed's reconstructive urology program addresses both common and neglected urological conditions, including urethral reconstruction for treatment of urethral stricture and related conditions; genital lymphedema treatment, such as hydrocele repair, for conditions such as lymphatic filariasis, or elephantiasis; vesicovaginal fistula (VVF) repair; and adult male circumcision for the prevention of HIV/AIDS.

According to the World Health Organization, 2 billion people worldwide have no access to basic surgical care, while 10% of the world's population receive 90% of surgical care.

INTERNATIONAL SCHOLARSHIPS

IVUmed International Scholars have the opportunity to travel to the United States from their home institutions in Africa, Asia, Central America and South America for further education. These surgeons from IVUmed partner sites attend professional conferences and observe urology programs at US-based teaching hospitals. Opportunities like the Dr. Pieter A. deVries Pediatric Surgery Scholarship complement the hands-on training and distance-learning components of our curriculum.

“The entire experience causes one to reflect on the inexplicable discrepancies that exist in the living conditions of those who have and have not. As one who has had everything, how can I make a difference that has a lasting impact and is perceived as being helpful?”

- Annette MacIntyre, MD, Anesthesiologist, Haiti

TRAVELING RESIDENT SCHOLARS

IVUmed's Traveling Resident Scholar Program gives urology trainees the opportunity to travel with a mentor to volunteer their time and talents in developing-world hospitals. Under the guidance of a board-certified urologist, trainees witness first hand the level of need in the countries in which they serve, the resourcefulness required to operate in such settings, the joy of serving children and adults in dire need of urological care, and the importance of continued international medical volunteerism and training. Over the past 13 years, more than 175 IVUmed scholars have participated in this unique experience.

As a third year medical student, I remember feeling lost, confused, and even slightly distraught trying to choose a specialty. However, once I discovered urology, it was a perfect fit. I quickly learned about the diverse opportunities within urology, not just domestically, but abroad as well. I first became aware of IVUmed at the AUA that year, and knew immediately that IVUmed was something I would pursue. I have been involved with many mission trips for both church and school throughout my life, but the idea of participating in a medical mission in my chosen field of practice was an exhilarating prospect. Now, the dream that first began six years ago, has become a reality. As I boarded the flight to Dakar, I remembered back to that day at the AUA—the idea

that my goal had actually come to fruition was quite surreal.

I decided to apply for a Traveling Resident Scholar Program scholarship in reconstruction as I am currently pursuing a fellowship in female pelvic medicine and reconstructive surgery. I thought this would expose me to diverse pathology, refine my operative skills, and allow me to assist patients who may not have access to healthcare—my trip to Dakar accomplished that, and much, much more.

Participating in IVUmed allowed me to operate out of my comfort zone both literally and figuratively. Having the opportunity to operate with Dr. Kurt McCammon, who employs surgical techniques that differ from those of many of my own residency staff, allowed me to grow as a surgeon technically, and again allowed me the opportunity to adapt in my foreign surroundings. Experiencing diverse cultures, learning new surgical techniques, witnessing vast pathologies, and helping patients in need all contributed to an amazing IVUmed experience for me. IVUmed allows residents to grow both personally and professionally, and I would certainly recommend the program to all.

**IVUMED INVITES YOU TO TAKE PART IN OUR
MISSION - ENRICHING THE HEALTHCARE
CAPACITY OF NATIONS IN NEED.**

WHERE WE WORK

PROVIDING MORE THAN SERVICE, IVUMED SEEKS
TO BUILD LOCAL CAPACITY, MAGNIFYING
OUR VOLUNTEERS' EFFORTS.

HAITI

STARTING YEAR	1999
POPULATION (MIL)	9.9
DOCTORS/1000 PEOPLE	0.25
PROGRAMS HOSTED	General, Reconstructive, Female Urology, Resident Scholar

IVUmed has collaborated with the *Société Haitienne d'Urologie* for over a decade. Working side-by-side with Haitian surgeons, workshops have been conducted in five cities and now focus on advanced urologic topics including urethral stricture and obstetric fistula repair.

HONDURAS

STARTING YEAR	1992
POPULATION (MIL)	8.4
DOCTORS/1000 PEOPLE	0.57
PROGRAMS HOSTED	Pediatric Urology, Resident Scholar

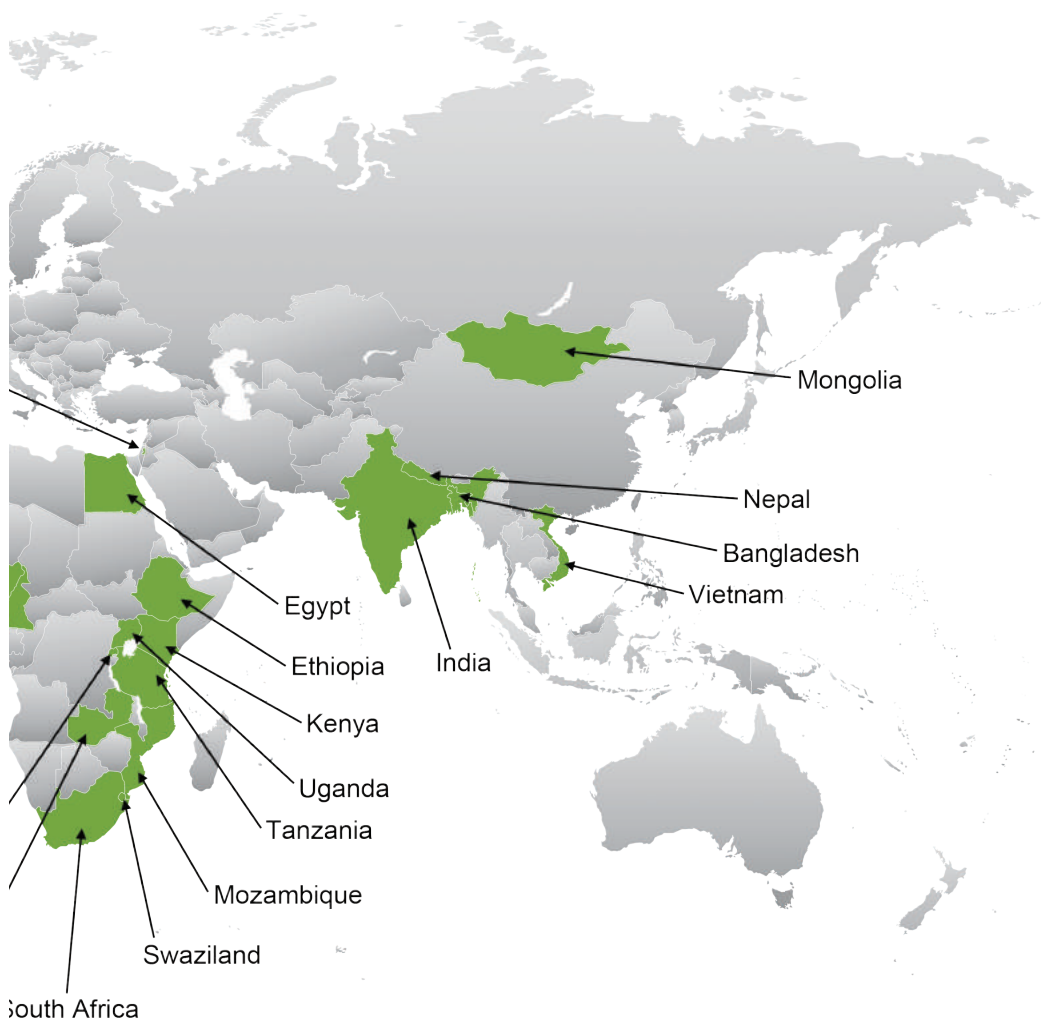

As IVUmed's first training site in 1992, our partner surgeons in Honduras have advanced past basic IVUmed workshops. They have built a dynamic urology program capable of performing common pediatric surgeries. They now organize their own annual urology training outreach programs, assisted by IVUmed volunteer specialists who focus on teaching more complex surgeries and techniques.

Urology T

Teaching Programs

GHANA

STARTING YEAR

2002

POPULATION (MIL)

25.2

DOCTORS/1000 PEOPLE

0.09

PROGRAMS HOSTED

General, Pediatric
Urology, Resident Scholar

Working closely with leading urologists in West Africa, IVUmed continues to develop long-term relationships for training. After years of training in pediatric urology and lymphatic filariasis treatment in district hospitals, IVUmed will begin training partners in laparoscopic techniques. Urologists and medical professionals at the Teaching Hospital in Kumasi work together to expand pediatric urology care in the region.

KENYA

STARTING YEAR

2007

POPULATION (MIL)

44

DOCTORS/1000 PEOPLE

0.14

PROGRAMS HOSTED

Pediatric, Reconstructive
Urology, Resident Scholar

Kenya has fewer than 30 urologists in a country of over 44 million people. By participating in the annual meeting of the *Kenya Association of Urologic Surgeons*, IVUmed volunteer specialists are able to work with nearly all urologists in the country at one time. During a one-week intensive training, they focus on specific areas of urology, including pediatric and reconstructive urology, that have been requested by the association.

"I found it inspiring to witness the Kenyan Association of Urologic Surgeons (30 surgeons in a country of 44,000,000 people), be so motivated to improve themselves and the care for their countrymen."

■ 15

- Britt Zimmerman, DO, Urologist, Kenya

MONGOLIA

STARTING YEAR	2002
POPULATION (MIL)	3.2
DOCTORS/1000 PEOPLE	2.76
PROGRAMS HOSTED	General, Reconstructive, Pediatric Urology, Uro-oncology, Resident Scholar

In a country that predominately holds to a nomadic lifestyle and where horses outnumber humans, surgical care is difficult to obtain. As local surgeons advance and fine-tune the basic skills taught to them by IVUmed volunteers over 11 years, the focus has now turned to complex pediatric and adult conditions such as strictures, cancer, endoscopic stone management and advanced laparoscopic work.

Although the United States has roughly 1 urologist per 30,000 people, many African countries have only 1 per several *million*.

NIGERIA

STARTING YEAR	2003
POPULATION (MIL)	174.5
DOCTORS/1000 PEOPLE	0.4
PROGRAMS HOSTED	General, Reconstructive, Female Urology, Uro-oncology, Resident Scholar

As the most populous nation in Africa, Nigeria trains more doctors than any other in the region. Accordingly, there are more urologists in Nigeria than in any other country in sub-Saharan Africa. By collaborating with the *Nigerian Association of Urologic Surgeons*, IVUmed is able to reach a large group of surgeons-in-training.

RWANDA

STARTING YEAR	2011
POPULATION (MIL)	12
DOCTORS/1000 PEOPLE	0.02
PROGRAMS HOSTED	Pediatric, Reconstructive Urology

IVUmed first began working with Rwanda, our newest partner site, via a series of telehealth conferences. These focused on general and pediatric urological procedures and case presentations. Through use of distance learning, collaboration with local physicians can continue throughout the year, reinforcing the lessons learned during formal on-the-ground workshops.

Only 3.5% of surgical procedures are performed in the poorest one-third of the world. IVUmed is changing this by training more surgeons where they are needed most.

SIERRA LEONE

STARTING YEAR	2011
POPULATION (MIL)	5.6
DOCTORS/1000 PEOPLE	0.02
PROGRAMS HOSTED	Lymphatic Filariasis

IVUmed's urology outreach to Sierra Leone was initiated through a partnership with Sunny Mante, MD of Accra, Ghana, and a generous grant from Johnson & Johnson. Dr. Mante's efforts have focused on training for surgical treatment of hydroceles resulting from Lymphatic Filariasis (LF). His efforts will continue throughout the next year with additional workshops in West Africa.

SENEGAL

STARTING YEAR	2009
POPULATION (MIL)	13.3
DOCTORS/1000 PEOPLE	0.06
PROGRAMS HOSTED	General, Pediatric, Female, Reconstructive Urology, Resident Scholars

As an international center of education and excellence, Senegal is ideally situated to amplify IVUmed's regional approach to training. By gathering and training surgeons from multiple countries at one centrally located site, IVUmed resources and volunteer efforts have reached approximately 53 African medical professionals from 10 different West African countries.

UGANDA

STARTING YEAR	2010
POPULATION (MIL)	34.8
DOCTORS/1000 PEOPLE	0.12
PROGRAMS HOSTED	General, Pediatric, Female Urology, Resident Scholar

IVUmed's work in Uganda is centered primarily at Mulago Hospital in Kampala, the primary teaching hospital in the country. By working at teaching facilities, volunteers have the opportunity to train the trainers and impact the next generation of urology residents. This setting also creates an ideal opportunity for selected IVUmed Resident Scholars to interact with Ugandan residents, experience a new side of urology, and better understand the limitations for medical resources that exist worldwide.

VIETNAM

STARTING YEAR	1994
POPULATION (MIL)	92.5
DOCTORS/1000 PEOPLE	1.22
PROGRAMS HOSTED	General, Pediatric Urology, Resident Scholar

IVUmed volunteers began working with Vietnamese pediatric surgeons in 1994. At the time, fewer than 100 pediatric urology patients were treated annually. After several years of successful training, the surgeons now run their own training programs independently and treat more than 1000 patients annually.

**WITH OVER 20 YEARS OF EXPERIENCE, IVUMED
IS A LEADING VOICE AMONG GLOBAL PIONEERS
IN HEALTHCARE AND DEVELOPMENT.
JOIN US.**

WEST BANK

STARTING YEAR	2007
POPULATION (MIL)	2.7
DOCTORS/1000 PEOPLE	Unknown
PROGRAMS HOSTED	General, Uro-oncology, Pediatric Urology, Resident Scholar

IVUmed has worked with urologists in three major facilities in the West Bank. During trainings, volunteers lead large symposia, which are attended by nearly every urologist in the region. Advanced training, such as urologic oncology and reconstruction, provide the local surgeons with the skills they need to treat more patients in need.

ZAMBIA

STARTING YEAR	2010
POPULATION (MIL)	14.2
DOCTORS/1000 PEOPLE	0.06
PROGRAMS HOSTED	Pediatric, Reconstructive Urology, Resident Scholar

With the potential to efficiently train a large number of surgeons, the *College of Surgeons of East, Central, and Southern Africa* (COSECSA) requested the help of IVUmed to make urological training more widely available throughout the region. Building on the success of the regional training approach first started with our partners in Senegal, Zambia is well positioned and equipped as a centralized training site for Southern Africa.
