

Dear Friends,

Teach One, Reach Many. IVUmed's motto reflects the impact that each of our volunteers and donors has on the world. We provide medical and surgical training to physicians and nurses in low-resource areas of the world. In doing so, we help address a major cause of extreme poverty—lack of access to quality healthcare.

Each person we train has the potential to reach hundreds, even thousands, of children and adults in need. That is the power of your support. Together, we build something that continues beyond the bounds of each individual's efforts.

Every patient we reach gains the opportunity to live a healthy, productive life. And by striving to build sustainable surgical teaching programs, your impact is magnified exponentially.

We teach individual providers. We serve individual patients. With your help, we build a global network that reaches thousands. In the end, we hope that no one will be denied access to the expert care that we often take for granted. Each life matters – and each of you makes a tremendous impact on every person we reach.

With Gratitude,

Kurt McCammon, MD, Board Chair

Joshua Wood, Executive Director

Our Mission

IVUmed is committed to making quality urological care available to people worldwide. In fulfilling this mission, IVUmed provides medical and surgical education to physicians and nurses and treatment to thousands of children and adults.

Teach One, Reach Many

Our Work

We train healthcare providers in surgical process and specific urological procedures. We use a hands-on approach that builds over five years. Volunteer experts teach procedures as they treat patients. As the local surgeons gain experience, they serve patients, and they teach their peers. IVUmed volunteers return to teach more advanced procedures. The cycle continues until each country has the ability to care for most cases.

The Need

Five billion people lack access to basic surgical care. Specialized care like urology is even harder to find. The United Nations cites lack of healthcare as a root cause of extreme poverty. Debilitating health conditions drain family resources. They prevent many throughout the world from earning a living. A child unable to attend school. A breadwinner unable to work. Family members obliged to stop working or attending school to care for a relative. These scenarios contribute to long-term poverty. Millions of people worldwide await expert care to help rebuild their lives. The answer to the shortage of surgical care is hands-on training of local personnel.

There is a dearth of urology experts in low-resource areas. For example, there are currently no fellowship trained pediatric urologists in Sub-Saharan Africa. We train hundreds of doctors and nurses in Africa. They will then provide care to thousands of children and adults in need of surgical care. The need is great. Urological conditions are up to ten times more common than cleft lip and palate. Urological cancers comprise 25% of all cancers worldwide. With your help, we address the critical shortage of trained personnel.

“IVUmed is a group of dedicated and capable individuals devoted to the cause of helping those in less fortunate situations. The goal is not to simply support guest surgeons but to transfer knowledge to local doctors who can extend the reach far beyond that achieved by periodic short visits.”

- Joseph A. Smith, Jr., MD - Urologic Oncologist - Mongolia

What We Do

GENERAL UROLOGY

Urological conditions are common, but due to their private nature, the global need for urological care is often overlooked. IVUmed works with doctors and nurses throughout the world to build provider skills and availability of care. Through our general urology program, we provide training in cystoscopy, TURP, management of stone disease, and other common conditions.

FEMALE UROLOGY

Many of the world's youngest and poorest mothers give birth without any medical help. In many cases where there is an obstruction of the birth canal, an expectant mother will endure days of painful, prolonged labor. Her baby likely will not survive. If she lives, childbirth has broken her body. Uncontrollably leaking, she could be shunned by her family and community.

More than one million women worldwide are currently suffering this heartbreaking but treatable condition called vesico-vaginal fistula (VVF). We work with doctors and nurses in Africa, Haiti, and elsewhere to train medical personnel and to help women suffering from VVF and other forms of incontinence.

**Building capacity for

“The local surgeons were very grateful for the knowledge and guidance our surgeons gave. As a nurse, I worked closely with the local nurses. We answered questions and they taught us too. It was a wonderful experience.”

- Jannae Bird, RN - Rwanda

PEDIATRIC UROLOGY

Emmanuel loves soccer. Every day, he goes to the makeshift soccer field in his village in rural Ghana. But instead of playing, Emmanuel can only watch. In fact, he sits on the sidelines for many things in life. Emmanuel was born with his bladder protruding through his abdomen. Without surgical care, he must walk around with a plastic bag hanging at his hip. He is always at risk of infection. His skin is raw from the urine that leaks from his belly. Emmanuel is fortunate to have parents who stand by him when others avoid him. When asked what they want for their little boy, Emmanuel's parents have a simple answer: "We want him to be able to play soccer with his friends." Our experts repaired his condition while training local surgeons in Kumasi. Our pediatric program helps thousands of children like Emmanuel by making quality care more accessible in their communities.

TECHNOLOGY

We use technology to reach even more people. Interactive telehealth lectures, online training materials, and distance consultations complement our on-site training. Technology plays an important role in measuring the impact of our programs. IVUmed's telehealth program also benefits rural primary care providers in the United States, with consultation and Continuing Medical Education (CME) instruction in urology.

RECONSTRUCTIVE UROLOGY

One accident made Bastian's life stand still. He was sixteen when a bus hit him near his school in Rwanda. His pelvis was crushed, damaging his bladder and urethra. Ever since, he has had a tube that drains his bladder running from his abdomen to a plastic bag, a bag that follows him everywhere. That was ten years ago. He hasn't been able to find work or start a family – until now. Our experts repaired his injuries. At the same time, they trained surgeons from three African countries who will serve their own communities. This means patients like Bastian will not wait years for the care they need to lead healthy and productive lives.

"There really are no better words to say than thank you. A deep concern invaded us and even plunged us into despair - we totally lost hope. The tears kept flowing from our eyes until the day of surgery. While I was in the recovery room, my wife asked if I would be okay. You said yes. From that word, our worries started flying away and we took force. I can only say thank you and all of your team. After the operation, I came from death to life."

- Patient in Haiti

UROLOGIC ONCOLOGY

Urological cancers comprise 25% of all cancers worldwide. Yet there are few doctors trained in urologic oncology in low-resource areas of the world. IVUmed connects experts in urologic oncology with training programs in Africa, Asia, and Latin America to help increase access to care.

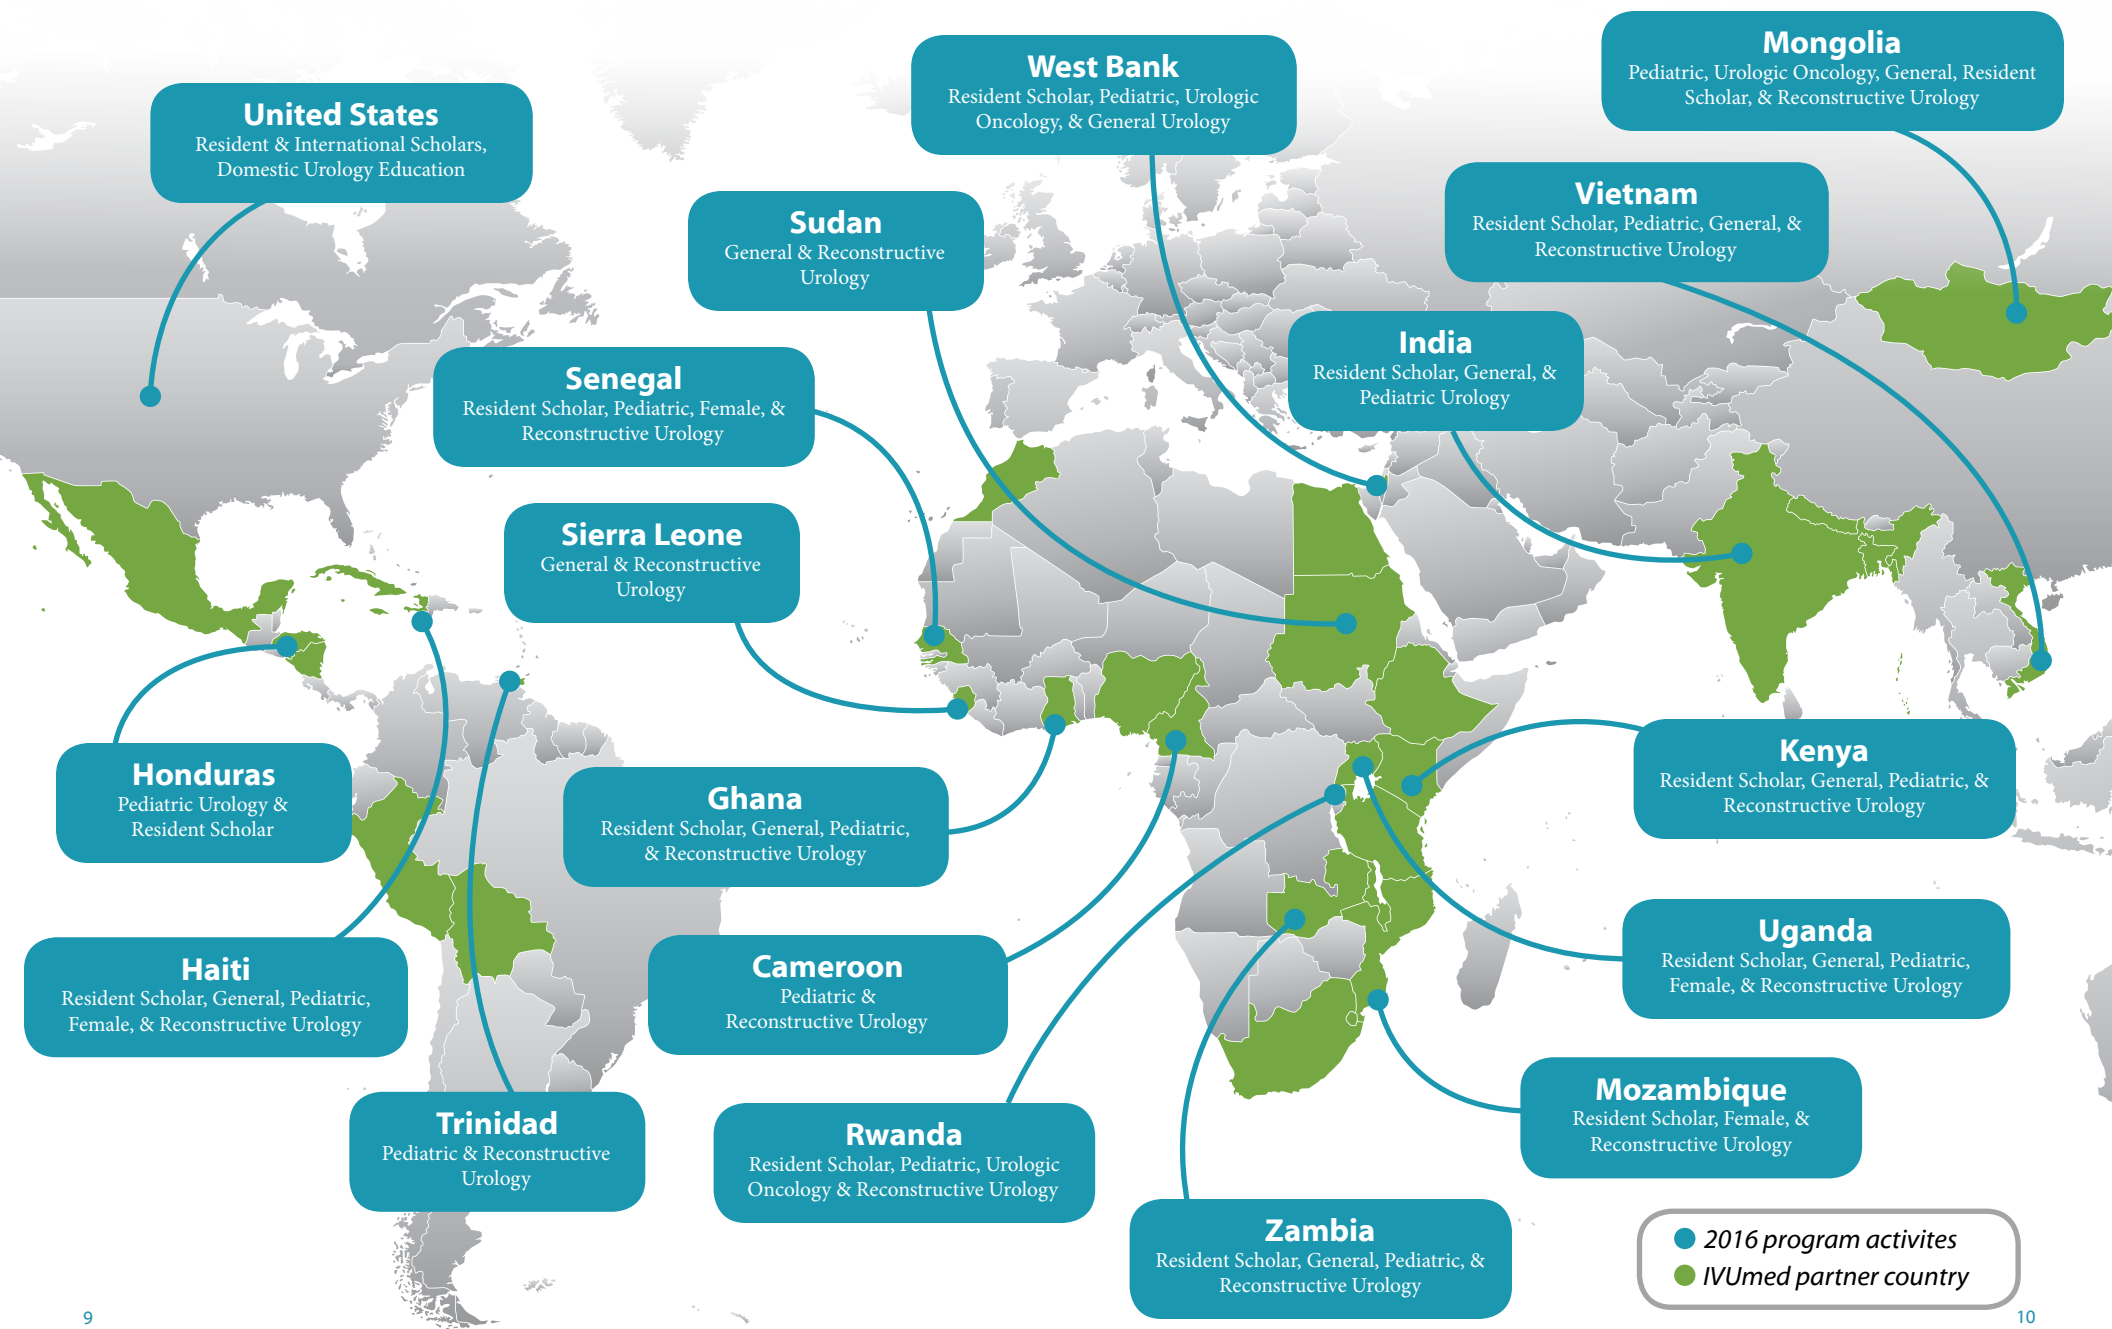

"The Mongolian surgeons are talented and improve dramatically with every IVUmed workshop."

- Jeremy Myers, MD - Reconstructive Urologist - Mongolia

For every \$1 spent on surgical capacity building, we prevent \$35 in GDP losses. (The Lancet Commission, 2015)

Where We Work

TRAVELING RESIDENT SCHOLARS

IVUmed's Traveling Resident Scholar Program gives urology trainees the opportunity to volunteer their time and talents in underserved parts of the world. Under the supervision of Board-certified mentors, resident scholars gain valuable hands-on experience, learn to operate in resource-limited settings, and establish lasting relationships with skilled doctors throughout the world. They accomplish this while providing care to patients in need. For many, a resident scholarship marks the beginning of a lifetime dedicated to international service. Over the past 16 years, more than 200 IVUmed scholars have participated in this unique experience.

"It was a privilege to have the opportunity to work alongside the urologists in Hue and participate in the delivery of urologic care. I was able to view urology through a new lens, and through this experience, I gained practical experience in a new environment."

Jennifer Heckman, MD - Vietnam

"Throughout our time there I could not help but reflect back on IVUmed's motto: Teach One, Reach Many. I feel this trip was the epitome of that ideal, as urologists from across all of Africa were able to experience what IVUmed stands for."

Matthew Ingham, MD - Senegal

"The most difficult part was realizing that even if we had an extra few days to operate on all the patients, what we could provide in that time was not necessarily what they needed. It was the understanding that just because we can, does not mean we should."

Geolani Dy, MD - Ghana

"We learned that a young lady who underwent vaginal reconstruction during the 2011 IVUmed workshop recently gave birth to a baby in the past year. It is gratifying to know that IVUmed is able to help children with complex genitourinary problems grow to be normal adults."

- Rama Jayanthi, MD - Pediatric Urologist - Honduras

Only 3.5% of surgical procedures are performed in the poorest one-third of the world. IVUmed is changing this by training more surgeons where they are needed most.
