

Annual Report 2015

Dear Friends,

Teach One, Reach Many. IVUmed's motto simply and clearly reflects the impact that each of our volunteers and donors has on the world. By focusing on providing world-class medical and surgical training to physicians and nurses in low-resource areas, we help address a major cause of extreme poverty—lack of access to quality healthcare.

Each person we train has the potential to reach hundreds, even thousands, of children and adults in need. That is the power of your support. Together, we build something that continues to grow beyond the bounds of each individual's efforts.

Every patient served by the dedication of our experts and the generosity of our supporters gains the opportunity to live a healthy, productive life. And by striving to build sustainable surgical teaching programs, your impact is magnified exponentially.

This year, our volunteer experts trained 324 medical professionals while providing life-changing care to 1,630 children and adults. The 14,683 hours of service donated to our work resulting in \$3.7 million in services provided. This is how our efficient organization maximizes every hour served and every dollar donated.

We **teach** individual providers. We **serve** individual patients. With your help, we **build** a global network that reaches thousands and thousands more providers and patients so that, ultimately, no one will be denied access to the expert care that we often take for granted. Each life matters - and each of you makes a tremendous impact on every person we reach.

With Gratitude,

Kurt McCammon, MD, Co-Chair

Peter Steelman, Co-Chair

Catherine R. deVries, MD, Founder

Joshua Wood, Executive Director

Teach One, Reach Many

Our Mission

IVUmed is committed to making quality urological care available to people worldwide. In fulfilling this mission, IVUmed provides medical and surgical education to physicians and nurses and treatment to thousands of children and adults.

Our Work

IVUmed collaborates with local partners throughout the world to train healthcare providers in surgical process and specific urological procedures. We use a workshop approach that typically builds over five years for each program. IVUmed volunteers teach procedures as they treat patients. As the students gain experience, they serve patients directly. Then they teach their peers. IVUmed volunteers return to teach more advanced procedures. The cycle continues until each host country has a pool of skilled talent and the ability to care for complex cases.

History

IVUmed was founded to address the enormous need for urological training and care in low-resource parts of the world. In 1992, in response to overwhelming demand for pediatric urology services, plastic surgery group ReSurge (then Interplast) invited IVUmed's founder, Catherine deVries, MD, to accompany them to Honduras. Pediatric urological conditions are up to 10 times more common than cleft lip and palate, a situation exacerbated by the global lack of surgeons trained in the field. To help make care more widely available, Dr. deVries founded IVUmed as an independent nonprofit organization in 1995, making this our 20th year.

“Our mission is to teach doctors like ourselves how to care for these children. Doing this work, in this place, with these people, gets under your skin and into your being. It becomes a part of who you are.”

- Francis Schneek, MD - Pediatric Urologist - Senegal, Trinidad, Zambia

What We Do

GENERAL UROLOGY

Urological conditions are common, but due to their private nature, the global need for urological care is often overlooked. IVUmed works with urologists throughout the world to build provider skills and the overall availability of care. Through our general urology program, we provide training in cystoscopy, TURP, management of stone disease, and other common conditions. Our volunteer experts work with surgical training programs in large teaching hospitals and also reach out to rural and district hospitals by helping to provide urology education to general surgeons. Our general urology volunteers work in a variety of settings reaching thousands of patients and their providers. They also serve as mentors for North American urology trainees through our Traveling Resident Scholar Program.

FEMALE UROLOGY

Many of the world's youngest and poorest mothers give birth without any medical help. In many cases where there is an obstruction of the birth canal, she will endure days of painful, prolonged labor. Her baby likely will not survive. If she lives, childbirth has broken her body. Uncontrollably leaking, these women are often shunned by their families and communities. More than one million women worldwide are currently suffering this heart-breaking but treatable condition called obstetric fistula.

IVUmed teams address obstetric fistula. Instead of leaving the mothers to a life of despair, our teams perform and teach surgery that can repair the pelvic floor, thus enabling the women to regain their dignity, their self-worth, and enjoy a meaningful life. The local physicians are then able to train their colleagues to perform this and other surgeries.

**Building capacity for
sustainable surgical care since 1995.**

PROVIDERS TRAINED
IN 2015 TO HELP
MORE CHILDREN

PEDIATRIC UROLOGY

Pediatric urological diseases, malformations, and injuries are among the most common conditions affecting children worldwide, yet many resource-limited areas of the world have no formal pediatric urology training. Mohamed, for example, a 10 year old boy in Senegal, was born with a congenital anomaly requiring him to carry a urine drainage bag with him. He dreamed of playing soccer with his friends, but had no access to the medical care he needed. This year, with the guidance of our surgical specialists, doctors in Senegal were able to correct his problem, giving him the opportunity to run and play as a child should. With pediatric urology programs in over 20 countries, our experts and partners help thousands of children like Mohamed by increasing access to quality care.

TECHNOLOGY

Incorporating technology into programs magnifies IVUmed's ability to reach more people through distance learning opportunities. Resources, such as interactive telehealth lectures, online training materials, and distance consultations complement the many global workshops carried out each year by IVUmed. Additionally, technology plays an important role in electronic medical record keeping and enables IVUmed to more effectively research the impact of the programs. IVUmed's telehealth program also benefits rural primary care providers in the United States, with consultation and Continuing Medical Education (CME) instruction in urology.

RECONSTRUCTIVE UROLOGY

Reconstructive urology is one of IVUmed's most sought after surgical training programs, due to the enormous prevalence of urethral injuries and diseases. Without access to proper care, individuals injured in low-resource countries are often unable to work or support their families. By focusing on training doctors to surgically correct these problems, IVUmed offers a new hope to many who would otherwise have suffered for the remainder of their lives. After a successful reconstructive surgery, a patient in Haiti expressed his gratitude:

"There really are no better words to say than thank you. A deep concern invaded us and even plunged us into despair - we totally lost hope. The tears kept flowing from our eyes until the day of surgery. While I was in the recovery room, my wife asked if I would be okay. You said yes. From that word, our worries started flying away and we took force. I can only say thank you and all of your team. After the operation, I came from death to life."

- Patient in Haiti

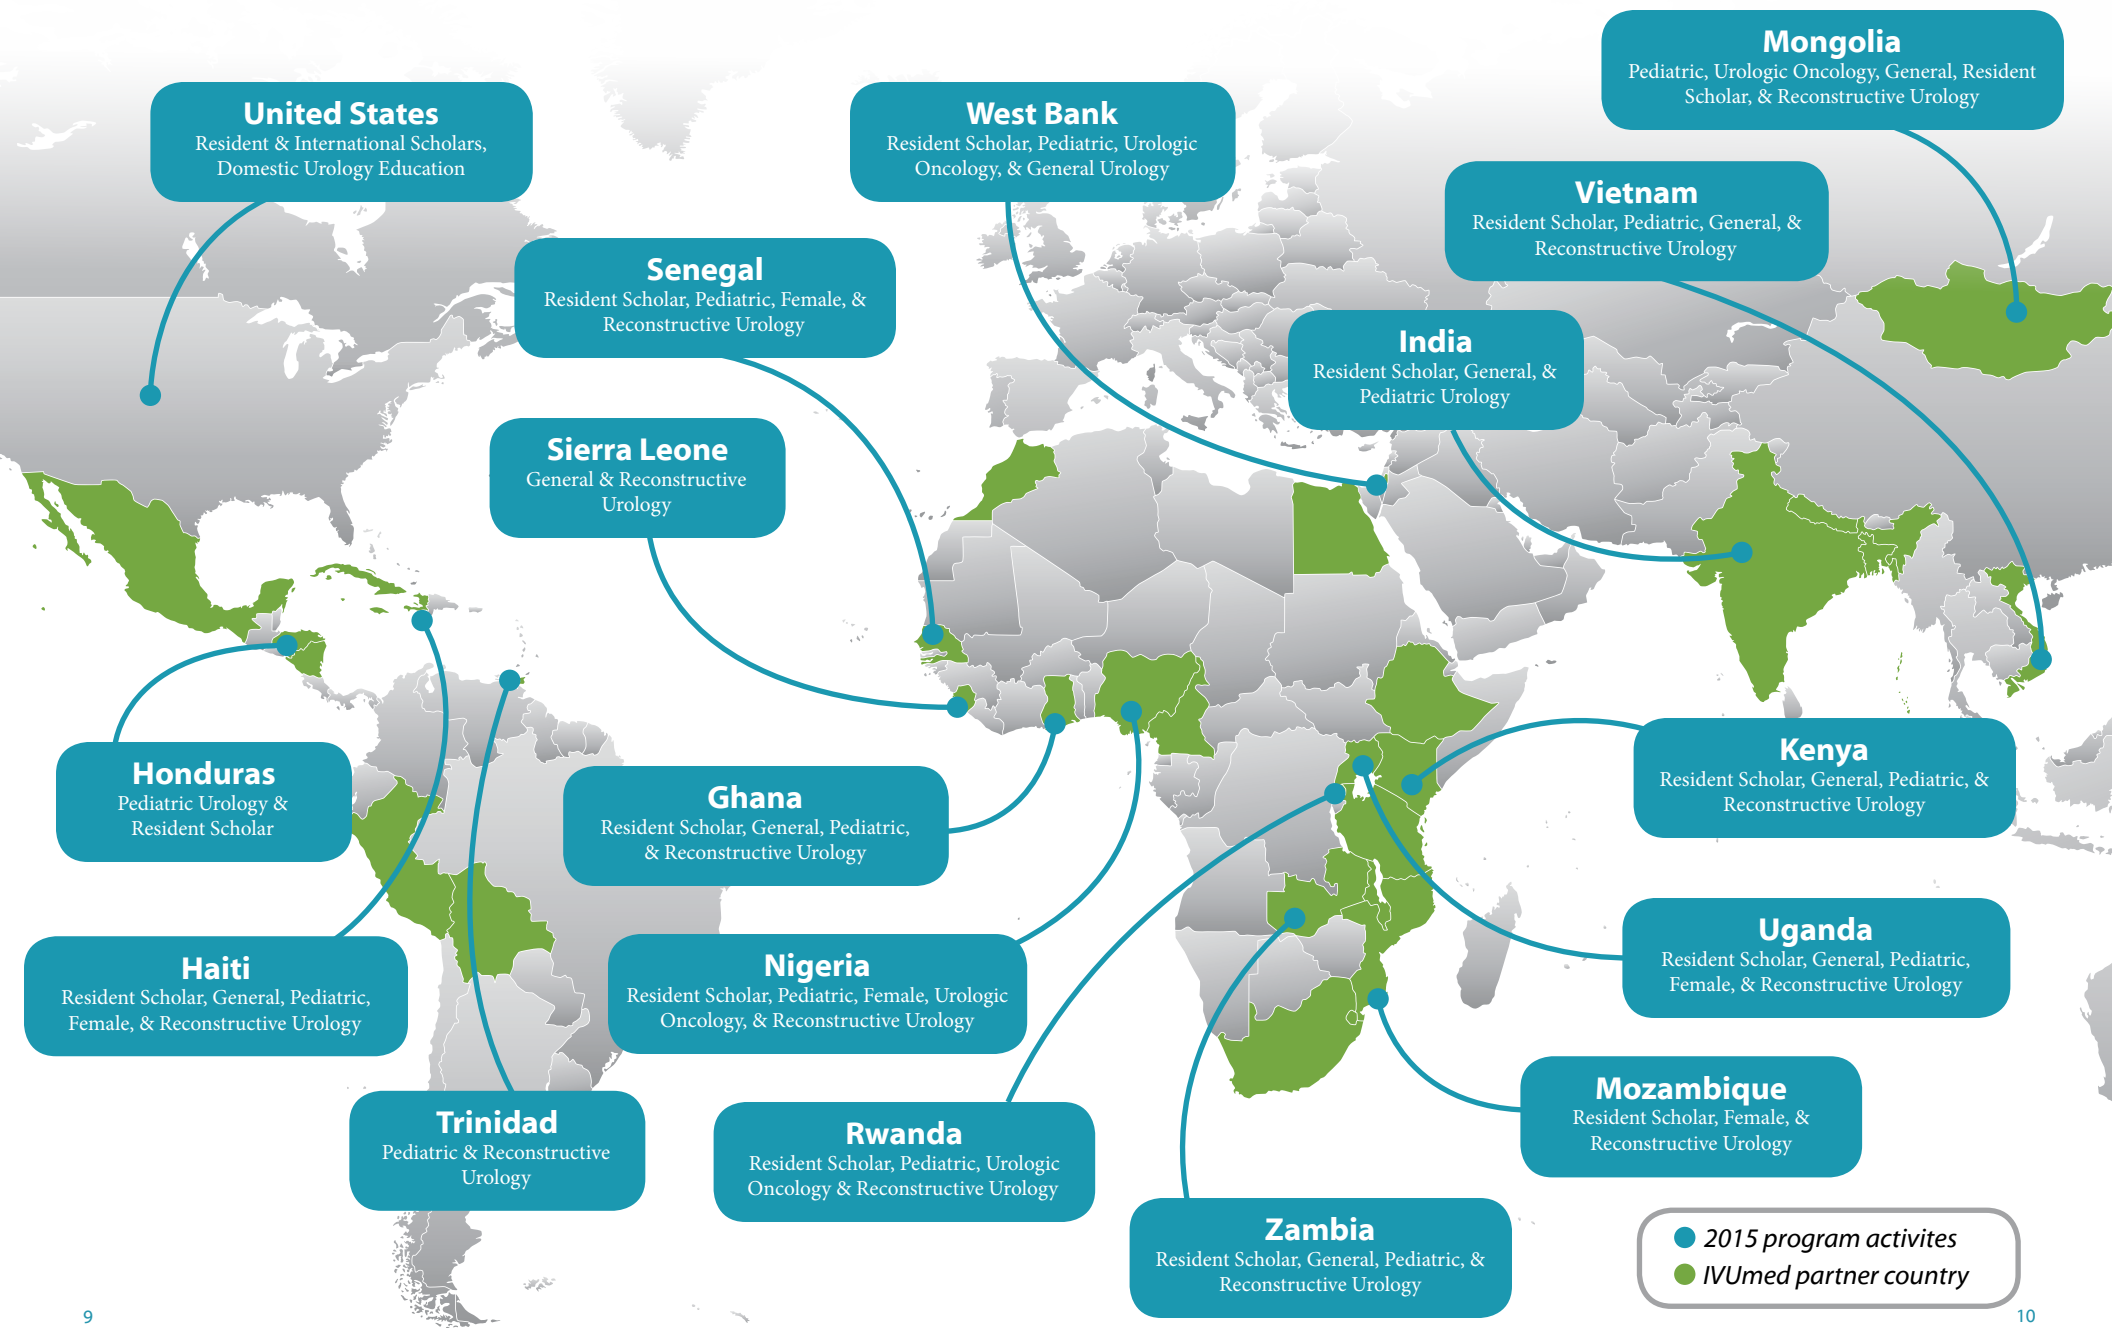

UROLOGIC ONCOLOGY

IVUmed connects experts in urologic oncology with training programs throughout the world to help increase access to care. The prevalence of prostate cancer exceeded 1 million cases in 2012, or 8 percent of all new cancer cases worldwide, while 430,000 cases of bladder cancer were diagnosed in 2013. Our oncology programs help make care in this critical field more widely available to address increasing need. This translates into greater quality of life for patients and healthier communities.

"It was heartening to see the level of enthusiasm from trainees at all levels. I felt that the Haitians are eager to develop the skills and to use them in their own practices. This is a transformative time for healthcare in Haiti, and we are lucky to be part of it."

- Catherine deVries, MD - Pediatric Urologist - Haiti

Where We Work

TRAVELING RESIDENT SCHOLARS

IVUmed's Traveling Resident Scholar program gives young physicians the opportunity to travel with a mentor for an international training experience. Under the guidance of a Board-certified urologist, trainees witness firsthand the level of need in the countries to which they travel, the resourcefulness required to operate in such settings, and the importance of continued international medical collaboration and training. Over the past 16 years, more than 200 IVUmed scholars have participated in this unique experience.

"I am so thankful that I was able to participate in this mission to Haiti. My opportunity to do this was only made possible by the generous donors who fund IVUmed. I thank you and want you to know of the change you are making in the lives of the patients treated, their families, and the members of each IVUmed team. Through IVUmed, we all become beacons of hope."

Nathan Hale, DO - Resident Scholar, Haiti

"Overall the trip exceeded my expectations and I was able to experience operating in a developing country with minimal resources and maximal efficiency of resource utilization. It was a tremendously valuable experience for me and the experience excited me about my hope in the future to regularly devote time to medical missions."

Andrew Leone, MD - Resident Scholar, Vietnam

"This trip was my first international medical trip and will not be my last. I had such a wonderful time meeting new people, seeing how to cope and work with less, appreciating the sophistication of the American medical system and working with such adorable children. The joy on the kids' faces was priceless. I can't wait to go back."

Amanda Saltzman, MD - Resident Scholar, Zambia

5 billion people have no access to basic surgical care. Help us make a change.

“The local urologists were so grateful for the experience. After working with them for even a week, I could see improvement in their techniques. Making a difference like this (though it will take time) will truly improve the country. They were a great group of people, and with a refreshing drive to enhance their skills. It was inspiring to be a part of such a great project that makes a real and immediate difference.”

- Jonathan Warner, MD - Reconstructive Urology Fellow, Haiti
