

Dear Friends,

Making connections. That is what IVUmed does. It is also what your support of IVUmed accomplishes.

Each year, hundreds of people reach out to IVUmed. Doctors in low-resource settings in Africa, Asia, and Latin America ask us for specialized training in various sub-fields of urology. They seek to enhance the skills they need to better serve their communities.

At the same time, hundreds of skilled doctors and nurses in the United States, Canada, Europe, and elsewhere approach IVUmed for volunteer opportunities. They are leaders in their fields, and they want to give back by sharing the skills they have worked so many years to acquire.

So we connect them. Each year, our volunteers spend thousands of hours teaching their host colleagues all over the world.

You make this possible. By donating your time and funds to support our programs, you help us make the connections that benefit thousands of people in need of life-changing surgical care. Thanks to you, we are building a global network of healthcare service and education that will live on for generations.

Thank you for helping us Teach One, Reach Many.

With Gratitude,

Kurt McCammon, MD, Board Chair

Joshua Wood, Executive Director

Teach One, Reach Many

Our Mission

IVUmed is committed to making quality urological care available to people worldwide. In fulfilling this mission, IVUmed provides medical and surgical education to physicians and nurses and treatment to thousands of children and adults.

Our Work

For over 20 years, IVUmed has been sending highly-skilled surgical teams to train doctors and nurses in Africa, Asia, and Latin America. We work with our host colleagues to increase local access to quality surgical care. Our teams begin by demonstrating and teaching surgical techniques while treating patients in need. Then, as the local physicians gain experience and expertise, they begin serving patients directly and teaching the techniques to their peers. IVUmed volunteers return often, over a number of years, teaching more and more advanced procedures as the local physicians' skills mature. The cycle continues until each host country has a pool of skilled talent with the ability to care for most patients on their own.

The Need

Five billion people lack access to basic surgical care. Specialized care like urology is even harder to find. The United Nations cites lack of healthcare as a root cause of extreme poverty. Debilitating health conditions drain family resources. They prevent many throughout the world from earning a living. A child unable to attend school. A breadwinner unable to work. Family members obliged to stop working or attending school to care for a relative. These scenarios contribute to long-term poverty. Millions of people worldwide await expert care to help rebuild their lives. The answer to the shortage of surgical care is hands-on training of local personnel.

“We were working with an end-goal in mind. The Haitians we cared for were truly grateful for the care, and the surgeons we trained were really grateful. Meeting a Haitian surgeon who has been coming to the programs for several years, and seeing the progress and skill level he has achieved from these weeks spent with the IVUmed teams really brought it full-circle. Teaching surgeons is the goal, and seeing his success means that IVUmed has been a success.”

- Natalie Gaines, MD - Reconstructive Urologist - Haiti

What We Do

PEDIATRIC UROLOGY

Emmanuel is eight-years old and loves soccer. Every day, he would go to the makeshift soccer field in his village in rural Ghana; but instead of playing, Emmanuel could only watch. He was born with a birth defect causing his bladder to protrude through his abdominal wall. Without surgical care, he was forced to wear a diaper. He was always at risk of infection. His skin was raw from the urine leaking onto his belly. Emmanuel was fortunate to have parents who stood by him when others avoided him. When asked what they wanted for their little boy, they had a simple answer: “We want him to be able to play soccer with his friends.” IVUmed’s volunteer surgeons repaired Emmanuel’s birth defect while training local surgeons in Kumasi, Ghana. Now Emmanuel can attend school and play soccer with his friends every day.

There are thousands of children like Emmanuel. Urological birth defects are some of the most common and debilitating conditions worldwide. But few doctors in low-resource areas of the world are training to repair them. IVUmed strives to make access to quality surgical care available to these children regardless of where they live.

“The surgeons went from having no lap nephrectomy skills to performing four at the end of the week without me scrubbing into the case. They subsequently sent me an e-mail the following week letting me know that they successfully performed a nephrectomy in under two hours which is great! I felt like I’ve made a real difference to urologic care in Trinidad in a very short time frame.”

- George Martin, MD - Urologist - Trinidad

FEMALE UROLOGY

Aisha's excitement about becoming a mother and greeting her first child turned into a nightmare. When she went into labor, the pain wouldn't stop, and the baby wouldn't come. After days of excruciating labor, she was finally taken to a far-off hospital, where she learned that her baby was dead. Aisha soon also found that the ordeal had left her body broken. The baby's head had pressed on her pelvic floor and crushed the tissue, creating a fistula between her bladder and vagina. She leaked urine constantly. To make matters worse, her family would not associate with her. Not only did she smell, she was now viewed with disappointment, judgement. First, she lost her baby; then she lost her health and her community.

Only about 2% of the one million women currently suffering from the heartbreaking but treatable condition called vesico-vaginal fistula (VVF) receive the surgical care they need. We work with doctors and nurses in Africa, Haiti, and elsewhere to train medical personnel and help women suffering from VVF and other forms of incontinence.

RECONSTRUCTIVE UROLOGY

One accident made Bastian's life stand still. He was sixteen when a bus hit him near his school in Rwanda. His pelvis was crushed, damaging his bladder and urethra. Ever since, he has had a tube that drains his bladder running from his abdomen to a plastic bag, a bag that follows him everywhere. That was ten years ago. He hasn't been able to find work or start a family – until now. Our experts repaired his injuries. At the same time, they trained surgeons from three African countries who will serve their own communities. This means patients like Bastian will not have to wait years for the care they need.

GENERAL UROLOGY

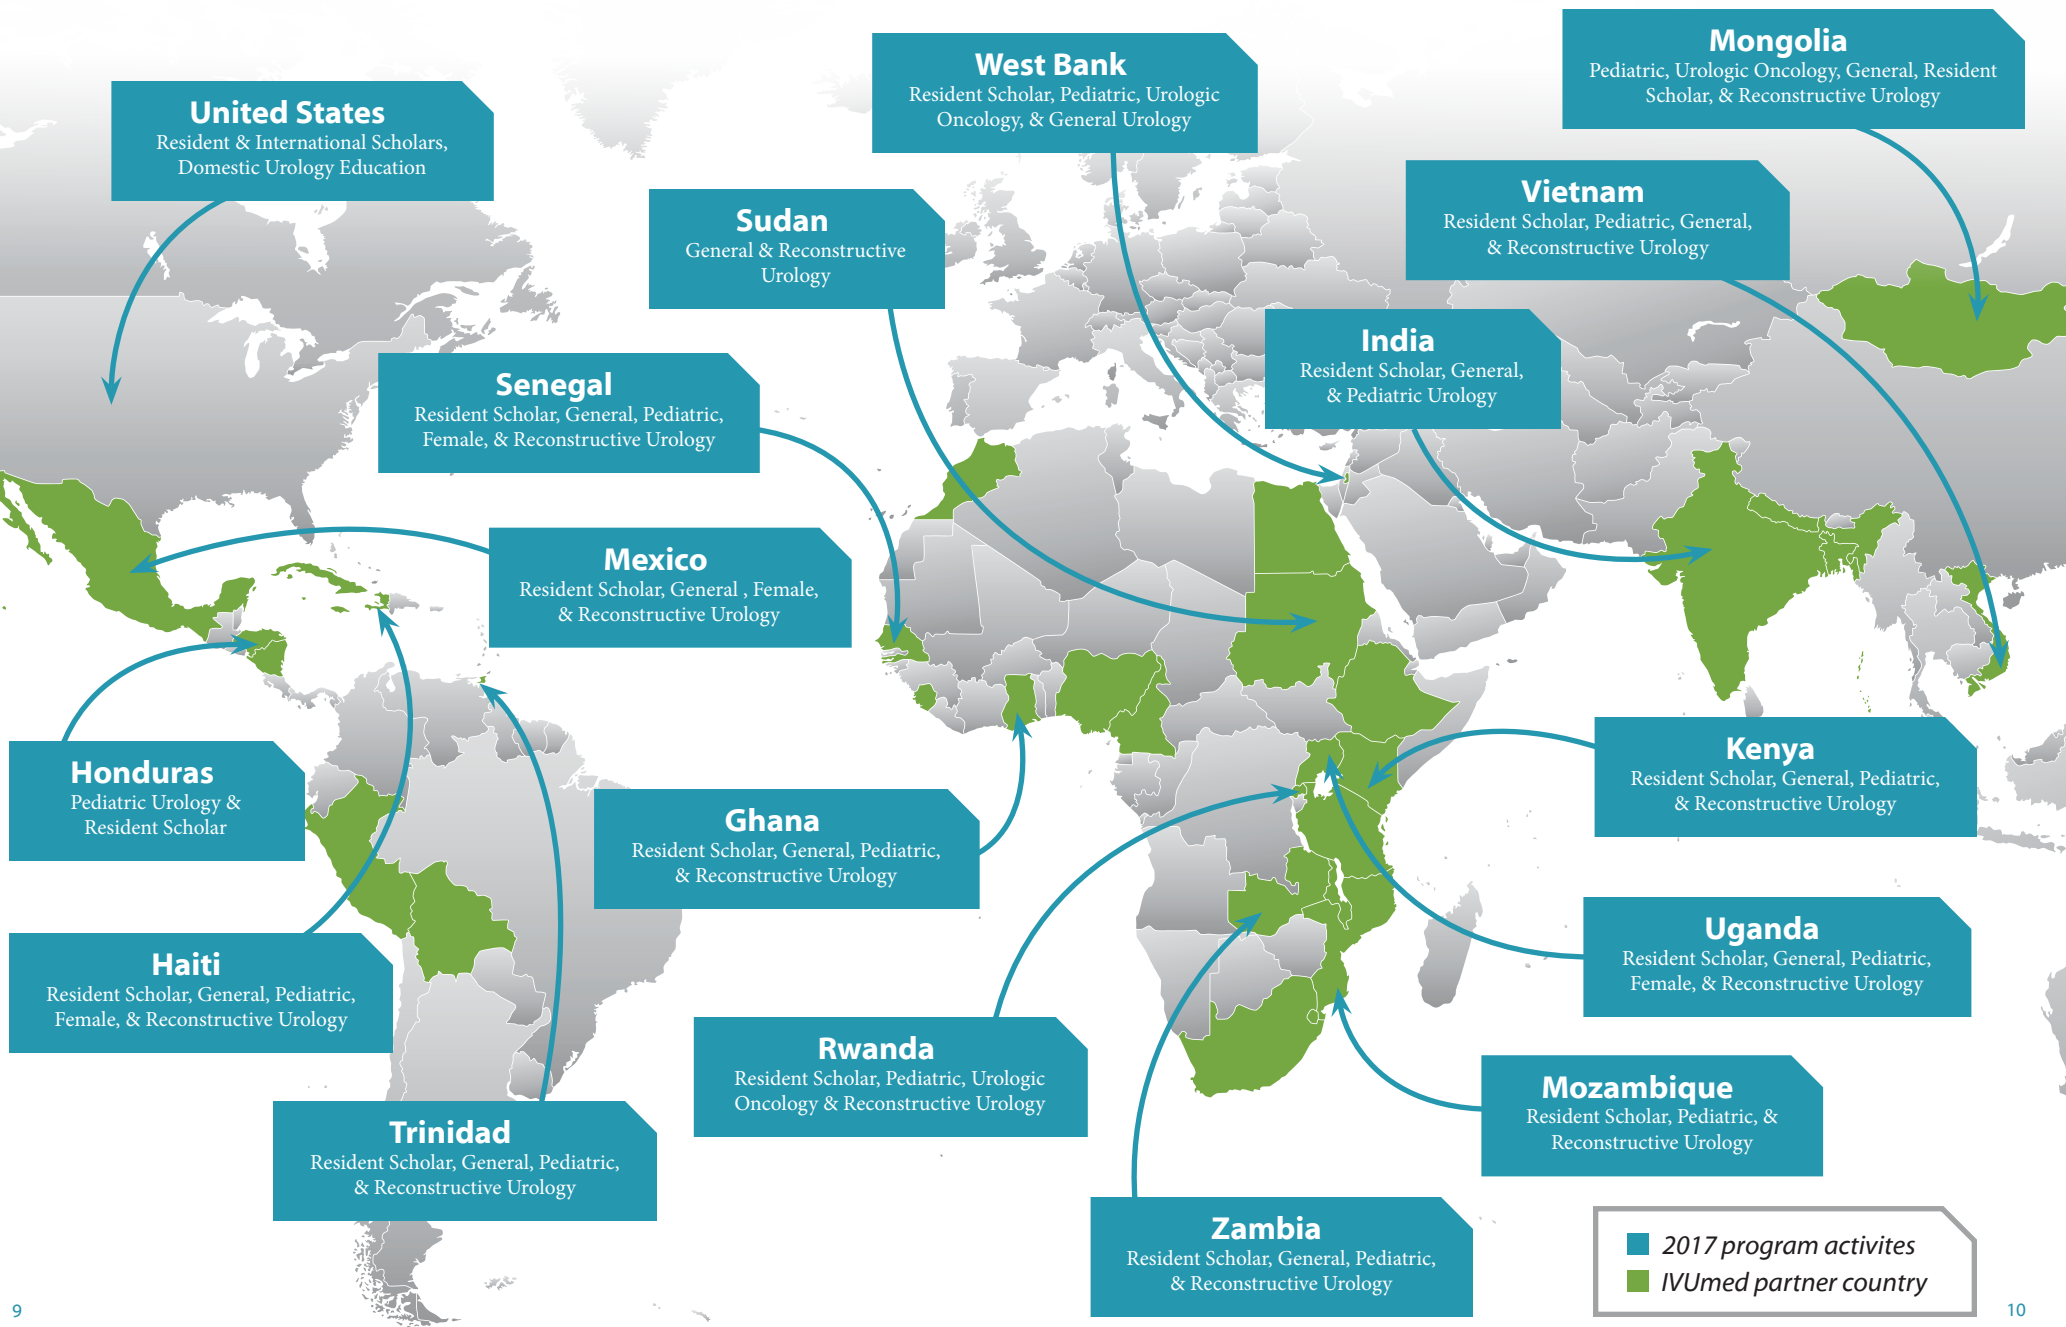

Urological conditions are common, but due to their private nature, the global need for urological care is often overlooked. IVUmed works with doctors and nurses throughout the world to build provider skills and availability of care. Through our general urology program, we provide training in cystoscopy, TURP, management of stone disease, and other common conditions.

“IVUmed trips are a breath of fresh air, reminding me why I became a surgeon and allowing me the fulfillment of truly helping both patients and colleagues. They are invaluable experiences for me, especially as young staff. Thank you for the opportunity to participate!”

- Christina Ching, MD - Pediatric Urologist - Ghana

Where We Work

IVUmed's workshop-based training model gives volunteers a safe and effective way to mentor, teach, and return to the grassroots of medicine.

UROLOGIC ONCOLOGY

Urological cancers comprise 25% of all cancers worldwide. Yet there are few doctors trained in urologic oncology in low-resource areas of the world. IVUmed connects experts in urologic oncology with training programs in Africa, Asia, and Latin America to help increase access to care.

TECHNOLOGY

What makes IVUmed unique? Part of the answer lies in the community we build. Our volunteer experts go beyond providing intensive hands-on training to their hosts in Africa, Asia, and Latin America. They also serve as mentors to help them build lasting programs and innovative careers.

We use technology to reach even more people. Interactive telehealth lectures, virtual grand rounds, online training materials, and distance consultations complement our on-site training. Technology plays an important role in measuring the impact of our programs. IVUmed's telehealth program also benefits rural primary care providers in the United States, with consultation and Continuing Medical Education (CME) instruction in urology.

Only 3.5% of surgical procedures are performed in the poorest one-third of the world. IVUmed is changing this by training more surgeons where they are needed most.

**Join our tradition of leadership
in global surgical training**

TRAVELING RESIDENT SCHOLARS

IVUmed's Traveling Resident Scholar Program gives urology trainees the opportunity to volunteer their time and talents in underserved parts of the world. Under the supervision of Board-certified mentors, resident scholars gain valuable hands-on experience, learn to operate in resource-limited settings, and establish lasting relationships with skilled doctors throughout the world. They accomplish this while providing care to patients in need. For many, a resident scholarship marks the beginning of a lifetime dedicated to international service. Over the past 18 years, 235 IVUmed scholars have participated in this unique experience.

Since 1999

"Global surgery remains an actively expanding field and enthusiasm for the opportunities to participate abound, particularly amongst our trainees. IVUmed should be congratulated on their continued commitment to providing valuable care to those who need it most and for including residents in their work. Their moto of 'Teach One, Reach Many' remains an important consideration as we forge ahead, seeking ways to collaborate."

Chris Doiron, MD - Mexico

"I cannot thank IVUmed and the New York Section enough for providing these opportunities for residents. They are valuable and life changing both for the physicians and patients in the countries that are served, but also to the US based residents, fellows, and physicians that participate in these trips. I can definitely say that my experience in Vietnam strengthened my resolve to participate in international medicine upon completion of my urologic training."

Jyoti Chouhan, MD - Vietnam

"It was a privilege to be involved in a small step in sustainable improvement, meet the people of Senegal and see their country, have a hand in helping situations that were thought potentially helpless, and better understand the challenges of treating patients in the developing world. It reinforces a desire to continue this sort of work throughout my career."

- Will Fuller, MD - Urology Resident - Senegal
