

DEAR FRIENDS

In 1995, IVUmed was incorporated to address an enormous global health need. Children and adults around the world suffering from diseases and injuries of the reproductive and urinary tracts had few options for treatment. Today, many suffer still. So what has changed?

Over the past two decades, IVUmed has established itself as the only nonprofit organization dedicated to building urology capacity in resource-poor areas of the world. With your support, we have conducted urological and surgical teaching workshops in over 30 countries, serving thousands of patients in need while training hundreds of doctors and nurses, empowering them to meet future demand for care. For years, medical professionals around the world have sought out partnerships with us and they continue to invite us back.

IVUmed continues to expand into more areas. Our services have also been requested by more international medical and surgical associations, such as the *World Health Organization* (WHO) and the *College of Surgeons of East, Central and Southern Africa* (COSECSA), to help strengthen their urology programs. These partnerships helped us conduct 21 urological and surgical training events in the recent fiscal year. Each event translates into greater access to quality care in the host country.

Our volunteers and donors make this happen. IVUmed gives people who are passionate about urological care a safe, efficient way to make a lasting impact on patients and healthcare capacity worldwide. Beyond surgical tourism, we invite our volunteers to take ownership of our mission - enriching the healthcare capacity of nations in need. Volunteers tell us that being involved reminds them of why they went into medicine.

IVUmed's international presence keeps growing as we earn a seat at the table among leaders in global health and development. While many people around the world still suffer the physical and psychological burden of urological conditions, we are proud to be making a difference in the lives of so many.

Warmest Regards,

Catherine R. deVries, MD, President

Joshua Wood, Executive Director

Catherine deVries

Joshua Wood

TEACH ONE, REACH MANY

Why IVUmed?

IVUmed was founded to help address the global need for patient care and professional training in pediatric urology. IVUmed has since grown to include virtually all areas of urology and incorporates education for nurses, anesthesiologists, radiologists, pathologists and other professionals in related areas of medical and surgical care.

From congenital malformations like hypospadias, which occurs in one out of every 125 boys, to pelvic floor injuries among women, various cancers and other diseases, urology represents a vastly underserved area of global health. IVUmed is the only organization dedicated to teaching urology in under-resourced countries.

IVUmed's Approach

While IVUmed provides service directly to patients in need of urological and surgical care, we believe the lasting solution to the global shortage of available care involves building surgical capacity. By teaching doctors and nurses in resource-poor areas of the world the skills they need, people in their communities will have greater access to services.

We accomplish this through a combination of intensive hands-on surgical training, classroom instruction and remote telehealth consultation. This gives each of our global partners the opportunity to master one or more subfields of urology. Our partners become equipped to teach the skills they acquire to their students and colleagues, thereby increasing the network of urology professionals within each IVUmed program community.

A close-up photograph of two surgeons in an operating room. The surgeon in the foreground is wearing a blue surgical cap, glasses, and a white surgical mask with a blue pattern. The surgeon in the background is wearing a blue and white patterned surgical cap, glasses, and a white surgical mask. Both are wearing green scrubs. The background is a soft, out-of-focus green.

WHAT WE DO

A TRADITION OF LEADERSHIP IN
HANDS-ON UROLOGICAL TRAINING.

GENERAL UROLOGY

As rates for urological diseases such as kidney disease and bladder cancer continue to grow in developing nations, the demand for further training in general urology has increased. In addition to workshops using our proven training model, IVUmed volunteers focus on general urology through the Traveling Resident Scholar program.

IVUMED'S WORKSHOP-BASED TRAINING MODEL GIVES VOLUNTEERS OPPORTUNITIES TO MENTOR, TEACH, AND RETURN TO THE GRASSROOTS OF MEDICINE.

FEMALE UROLOGY

IVUmed's women's health program focuses on female urology, with an emphasis on incontinence. Vesico-vaginal fistula (VVF), a devastating condition in which a woman suffers incontinence due to injuries resulting from an obstructed labor or sexual violence, affects over two million women worldwide. Treating VVF and other causes of incontinence is one of the most important steps in returning women to safe, productive lives. The women's health program also focuses on other conditions, like pelvic prolapse, while bringing together experts in female urology for training and capacity building in sub-Saharan Africa, Haiti and elsewhere.

"You want to volunteer and make an impact. You need an infrastructure - partners who can get you where you are most needed, keep you safe, and make sure the work you do is lasting. That's what IVUmed does."

- Hiep Nguyen, MD, Kenya

PEDIATRIC UROLOGY

When established in 1992, IVUmed's first programs were dedicated to pediatric urology. Reproductive and urinary tract malformations are among the most common birth defects affecting children worldwide. IVUmed addresses the lack of trained doctors able to treat this overwhelming burden through specialized intensive trainings and distance learning opportunities. Due to continued demand, we have conducted these trainings in over 20 countries since the program first began.

HYPOSPADIAS is a congenital defect in which the urethra is on the underside of the penis rather than at the tip. One in every 125 boys is born with hypospadias. It results in abnormal curvature of the penis upon erection and difficulties in proper urination. If left untreated, there is possible infertility, fistulas and problems with sexual intercourse in adulthood.

UROLOGIC ONCOLOGY

Statistics have shown that urologic cancer rates are rising worldwide. According to the World Health Organization's International Agency for Research of Cancer, the number of prostate cancer cases alone is expected to nearly double to 1.7 million in less than 20 years. As a result, requests for IVUmed's urologic oncology trainings have increased significantly in recent years. IVUmed experts provide education for treatment of common urologic cancers such as bladder and prostate cancer. Recent programs in Mongolia, Nigeria, Uganda, and the West Bank have been successful in reaching more practitioners, allowing them to better serve their patients' needs.

RECONSTRUCTIVE UROLOGY

IVUmed's reconstructive urology program addresses both common and neglected urological conditions, including urethral reconstruction for treatment of urethral stricture and related conditions; genital lymphedema treatment, such as hydrocele repair, for conditions such as lymphatic filariasis, or elephantiasis; vesicovaginal fistula (VVF) repair; and adult male circumcision for the prevention of HIV/AIDS.

UROLOGIC CANCERS include cancers of the kidney, prostate, testicles and urinary bladder. Prostate cancer is prevalent worldwide, being one of the leading causes of cancer deaths in developing countries. Urinary bladder cancer (UBC) is the ninth most common cancer worldwide. Every year, 356,000 patients are diagnosed with UBC; 145,000 of these patients die annually. Developing countries are seeing an increase in UBC due to an increase in smoking habits.

INTERNATIONAL SCHOLARSHIPS

IVUmed International Scholars have the opportunity to travel to the United States from their home institutions in Africa, Asia, Central America and South America for additional education. These surgeons from IVUmed partner sites attend professional conferences and observe urology programs at US-based teaching hospitals. Opportunities like the Dr. Pieter A. deVries Pediatric Surgery Scholarship complement the hands-on training and distance-learning components of our curriculum.

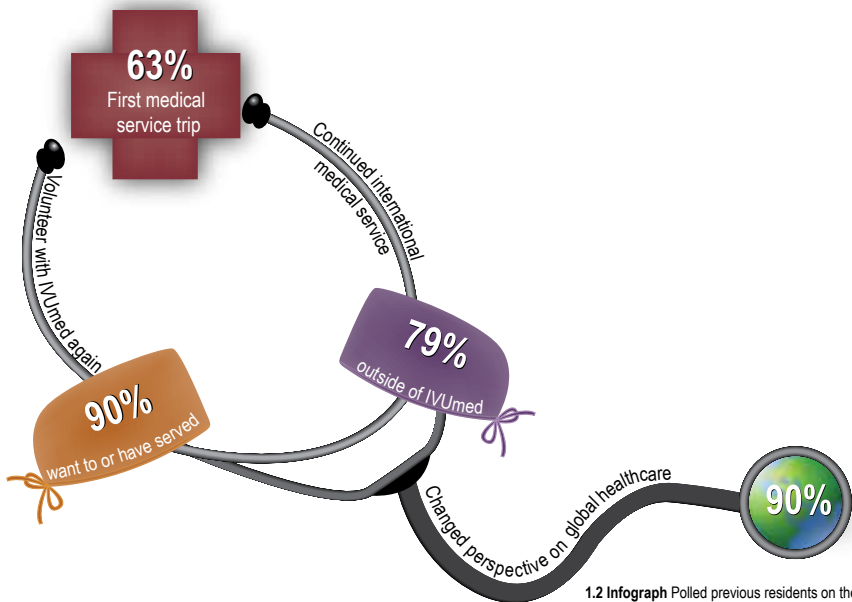

"I enjoy helping people in need, and enjoy interacting with people with different backgrounds and cultures...I take from them as much as they get from me. The fact that most of the cases are very challenging is an additional incentive."

- Carlos Angel, MD, FACS. Vietnam

TRAVELING RESIDENT SCHOLARS

IVUmed's Traveling Resident Scholar Program gives urology trainees the opportunity to travel with a mentor to volunteer their time and talents in developing-world hospitals. Under the guidance of a board-certified urologist, trainees witness first hand the level of need in the countries in which they serve, the resourcefulness required to operate in such settings, the joy of serving children and adults in dire need of urological care, and the importance of continued international medical volunteerism and training. Over the past 12 years, more than 150 IVUmed scholars have received a mentored international scholarship.

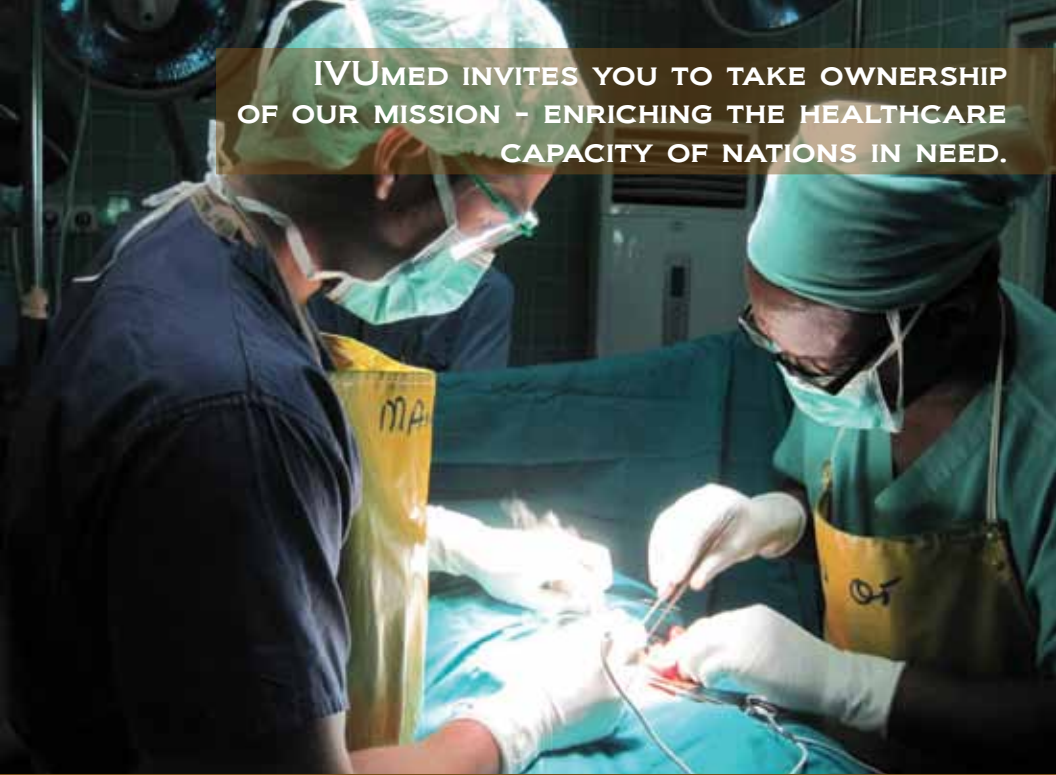

Resident Scholars Experience:

1.2 Infograph Polled previous residents on their experience as an IVUmed Traveling Resident Scholar.

"During a selfish time of intense training tempered by chronic fatigue, IVUmed offered me a reprieve, a chance to rekindle some of my passion for medicine."
- Yasmin Bootwala, MD, Resident Scholar, Uganda

A photograph of two women standing outdoors in a dry, wooded area. The woman on the left is wearing a red and blue patterned shuka and a grey wrap around her waist. She is smiling and has her hand near her face. The woman on the right is wearing a yellow shuka with red polka dots and a red shuka draped over her shoulders. She is also smiling and holding a wooden staff. The background shows a dry landscape with scattered trees and bushes.

WHERE WE WORK

**PROVIDING MORE THAN SERVICE, IVUMED SEEKS
TO BUILD LOCAL CAPACITY, MAGNIFYING
OUR VOLUNTEERS' EFFORTS.**

HAITI

STARTING YEAR	1999
POPULATION (MIL)	9.8
DOCTORS/1000 PEOPLE	0.25
PROGRAMS HOSTED	General, Female Urology, Resident Scholar

IVUmed has collaborated with the *Société Haitienne d'Urologie* for over a decade. Working side-by-side with Haitian surgeons, trainings have been conducted in five cities and now focus on advanced urologic topics including urethral stricture and obstetric fistula repair.

HONDURAS

STARTING YEAR	1992
POPULATION (MIL)	8.3
DOCTORS/1000 PEOPLE	0.57
PROGRAMS HOSTED	Pediatric Urology, Resident Scholar

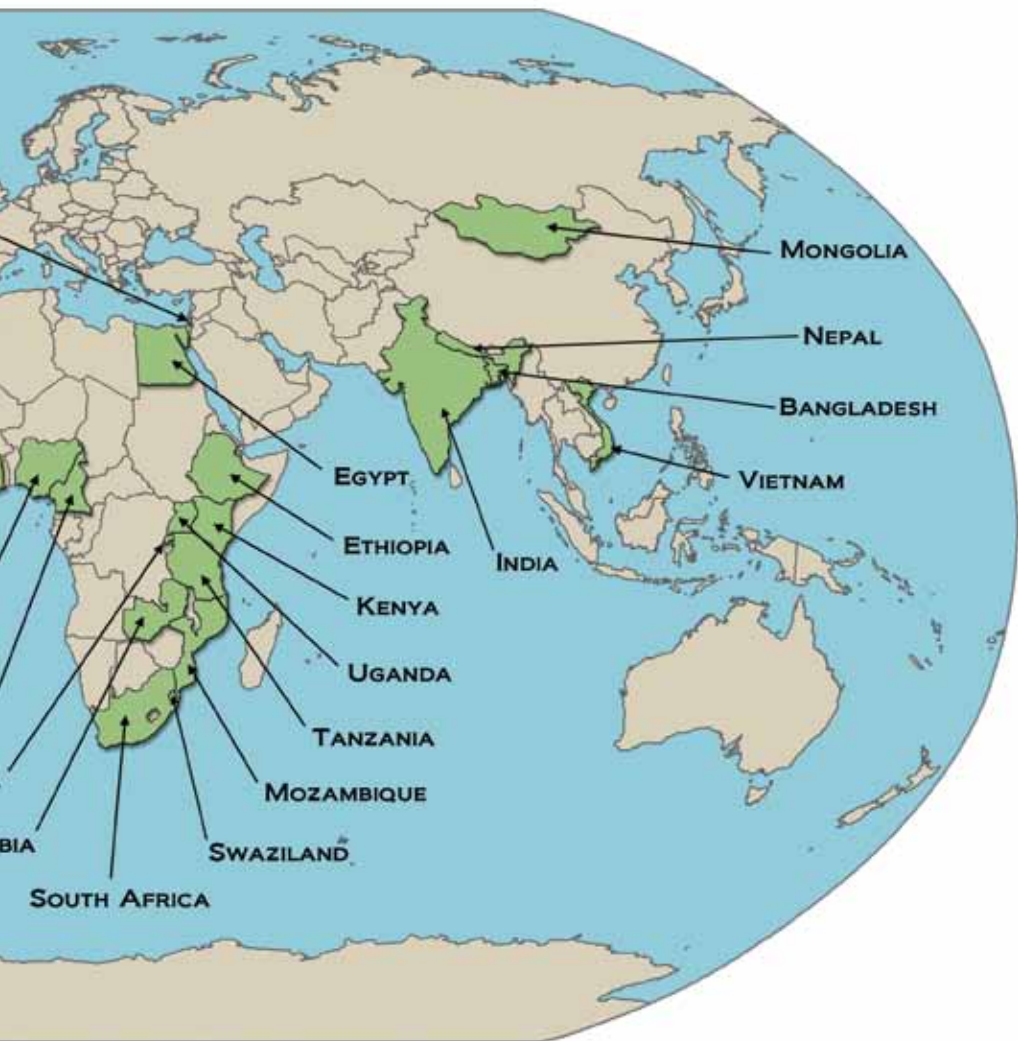

As IVUmed's first training site in 1992, our partner surgeons in Honduras have advanced past basic IVUmed trainings. They have built a dynamic urology program capable of performing common pediatric surgeries. They now organize their own annual urology training outreach programs, assisted by IVUmed volunteer specialists who focus on teaching more complex surgeries and techniques.

"In our own struggles, many of us have forgotten the struggles of others and why we came down this path in the beginning. IVUmed represents all that most of us believe being a doctor embodies: selflessness, beneficence, generosity and compassion."
- Matthew Lux, MD, Resident Scholar, India

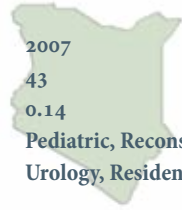

TEACHING PROGRAMS

1.3 Map IVUmed teaching workshop host countries since inception in 1992.

KENYA

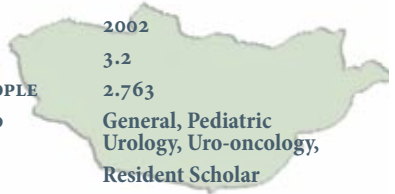

STARTING YEAR	2007
POPULATION (MIL)	43
DOCTORS/1000 PEOPLE	0.14
PROGRAMS HOSTED	Pediatric, Reconstructive Urology, Resident Scholar

Kenya has fewer than 30 urologists in a country of over 41 million people. By participating in the annual meeting of the *Kenya Association of Urologic Surgeons*, IVUmed volunteer specialists are able to work with nearly all urologists in the country at one time. During a one-week intensive training, they focus on specific areas of urology, including pediatric and reconstructive urology, that have been requested by the association.

MONGOLIA

STARTING YEAR	2002
POPULATION (MIL)	3.2
DOCTORS/1000 PEOPLE	2.763
PROGRAMS HOSTED	General, Pediatric Urology, Uro-oncology, Resident Scholar

In a country that predominately holds to a nomadic lifestyle and where horses outnumber humans, surgical care is difficult to obtain. As local surgeons advance and fine-tune the basic skills taught to them by IVUmed volunteers over 10 years, the focus has now turned to complex pediatric and adult conditions such as strictures, cancer, and advanced laparoscopic work.

"The experience far exceeded my expectations - there was tremendous opportunity for teaching, learning and continued collaboration."

-Laura Springhetti, CRNA, Haiti

NIGERIA

STARTING YEAR	2003
POPULATION (MIL)	170
DOCTORS/1000 PEOPLE	0.395
PROGRAMS HOSTED	General, Female Urology, Uro-oncology, Resident Scholar

As the most populous nation in Africa, Nigeria trains more doctors than any other in the region. Accordingly, there are more urologists in Nigeria than in any other country in sub-Saharan Africa. By collaborating with the *Nigerian Association of Urologic Surgeons*, IVUmed is able to reach a large group of surgeons-in-training.

VESICOVAGINAL FISTULA is a traumatic injury that results in an opening between the bladder and vaginal wall. Urine is able to pass from the bladder to the vaginal canal, resulting in incontinence. Due to prolonged obstructed labor, women suffer significant physical and emotional distress. Primarily in developing countries, approximately two million women worldwide are in need of VVF repair.

RWANDA

STARTING YEAR	2011
POPULATION (MIL)	11.7
DOCTORS/1000 PEOPLE	0.024
PROGRAMS HOSTED	Pediatric, Reconstructive Urology

IVUmed first began working with Rwanda, our newest partner site, via a series of telehealth conferences, which focused on general and pediatric urological procedures and case presentations. Through use of distance learning, collaboration with local physicians can continue throughout the year, reinforcing the lessons learned during formal on-the-ground workshops.

SIERRA LEONE

STARTING YEAR
POPULATION (MIL)
DOCTORS/1000 PEOPLE
PROGRAMS HOSTED

2011
5.5
0.016
Lymphatic Filariasis

IVUmed's urology outreach to Sierra Leone was initiated through a partnership with Sunny Mante, M.D. of Accra, Ghana, and a generous grant from Johnson & Johnson. Dr. Mante's efforts have focused on training for surgical treatment of hydroceles resulting from Lymphatic Filariasis (LF). His efforts will continue throughout the next year with additional workshops in East and West Africa.

LYMPHATIC FILARIASIS (LF) is a parasitic disease transmitted primarily through mosquitoes. The Carter Center estimates that 120 million people are infected with LF and another one billion people worldwide are at risk of infection. LF's most pronounced symptom, elephantiasis involves extreme swelling of the lower extremities, including hydrocele, which requires surgical repair.

SENEGAL

As an international center of education and excellence, Senegal is ideally situated to use IVUmed's regional approach to training. By gathering and training surgeons from multiple countries at one centrally located site, IVUmed resources and volunteer efforts have reached approximately 53 African medical professionals from 10 different West African countries.

UGANDA

STARTING YEAR	2010
POPULATION (MIL)	35.9
DOCTORS/1000 PEOPLE	0.117
PROGRAMS HOSTED	Pediatric, Female Urology, Resident Scholar

IVUmed's work in Uganda is centered at Mulago Hospital in Kampala, the primary teaching hospital in the country. By working at teaching facilities, volunteers have the opportunity to train the trainers and impact the next generation of urology residents. This setting also creates an ideal opportunity for selected IVUmed Resident Scholars to interact with Ugandan residents, experience a new side of urology, and better understand the limitations of medical resources that exist worldwide.

VIETNAM

STARTING YEAR

1994

POPULATION (MIL)

95.5

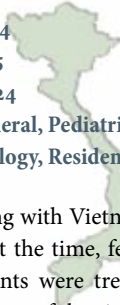

DOCTORS/1000 PEOPLE

1.224

PROGRAMS HOSTED

General, Pediatric

Urology, Resident Scholar

IVUmed volunteers began working with Vietnamese pediatric surgeons in 1994. At the time, fewer than 100 pediatric urology patients were treated annually. After several years of successful training, the surgeons now run their own training programs independently and treat more than 1000 patients annually.

WEST BANK

STARTING YEAR	2007
POPULATION (MIL)	1.7
DOCTORS/1000 PEOPLE	Unknown
PROGRAMS HOSTED	General, Pediatric Urology, Resident Scholar

IVUmed has worked with urologists in three major facilities in the West Bank. During trainings, volunteers lead large joint symposia, which are attended by nearly every urologist in the region. Advanced training, such as urologic oncology and reconstruction, will be provided in future symposia.

**WITH OVER 20 YEARS OF EXPERIENCE, IVUMED
IS A LEADING VOICE AMONG GLOBAL PIONEERS
IN HEALTHCARE AND DEVELOPMENT,
JOIN US.**

ZAMBIA

STARTING YEAR	2010
POPULATION (MIL)	14.3
DOCTORS/1000 PEOPLE	0.0055
PROGRAMS HOSTED	Pediatric, Reconstructive Urology, Resident Scholar

With the potential to efficiently train a large number of surgeons, the *College of Surgeons of East, Central, and Southern Africa* (COSECSA) requested the help of IVUmed to make urological training more widely available throughout the region. Building on the success of the regional training approach first started with our partners in Senegal, Zambia is well positioned and now equipped to be a centralized training site for this part of Africa.
